

Press Release 2011/04 #1

Castlegem opening 2 more points of presence.

We have recently opened two more points of presence for our dedicated servers and VPS services – a second PoP in Manchester, UK, and a PoP in Hannover, Germany. This brings the total number of points of presence to 6 – London, Manchester (2), California (USA), Vienna, and Hannover.

All data centres are state of the art and offer a perfect environment for all internet services available. Castlegem specialises in individual and tailor made solutions for dedicated servers and virtual private servers (VPS), both on Linux and Windows.

The latest expansion in Manchester and Hannover offers our customers an even broader range of dedicated server and bandwidth needs, as well as the ability to establish their own local presence in more than one country while being serviced from one and the same company.

All dedicated servers and VPS are branded hardware with full lifetime support, and offer a wide range of additional options such as managed system, 24/7 sysadmin availability, redundant servers, backup/recovery strategies, etc.

Our network is one of the fastest across the globe, and we pride ourselves with transit and uplinks that satisfy even the highest demands in terms of availability, speed, and topology.

With this kind of connectivity, we can accommodate any global bandwidth needs for high volume traffic, and our latest dedicated servers and virtual private servers along with our connectivity will give you the IT infrastructure you need for your internet and online venture.
