

Press Release 2012/05 #1

Castlegem deploying Dual E5 servers

Castlegem is pleased to announce the immediate availability of the latest E5 Dual CPU servers.

With the advent of the next generation Dual CPU servers based on Intel architecture, Castlegem is giving clients a new option for their enterprise online ventures. Starting with 2 E5-2620 CPUs, 4 Enterprise SATA drives, and 16GB of memory, customers can tailor their high performance server to their individual liking – faster CPUs, better drives like SAS or SSD, and of course more RAM.

On top of that, Castlegem throws in a large amount of bandwidth, both for EU and US locations – 10TB in and out each per month in the EU (UK, AT, and CZ), and 30TB in and out each per month in the US.

Prices are highly competitive and start from £ 630.00 net per quarter, an offer considerably lower than the typical market average.

All dedicated servers and Virtual Private Servers are branded hardware with full lifetime support, and offer a wide range of additional options such as managed system, 24/7 sysadmin availability, redundant servers, backup/recovery strategies, etc.
