

London Telehouse - SSD KVM VPS available

Castlegem is now offering high performance enterprise SSD backed virtual private server setups at the heart of UK's internet topology: London Telehouse.

Highly efficient E3-1265Lv2 CPUs coupled with Intel 520 SSDs in a RAID setup, along with KVM virtualisation technology guarantee fast performing, stable, and reliable service.

Benchmarks prove the point: IOPS are in excess of 40,000 - and sequential IO need not be ashamed either: 400MB/s will satisfy even demanding applications.

As of 2013, Castlegem will revamp all VPS plans - a huge step forward for the community spirit, as SSD plans will be available from as low as £ 9.90 net per quarter!

What's more, standard plans will come down to as low as £ 7.00 net per month - for 10GB of SSD space and ample memory and bandwidth!

Castlegem: *Enterprise performance for the community.*
