

Castlegem offering built-in DDOS protection in Chicago

Castlegem is now offering DDOS protected services at the recently opened Chicago Point of Presence. The service is provided through a tunnel setup served by Black Lotus, a leading company in the industry specialising in DDOS mitigation, prevention, and protection.

This service is available to all clients in Chicago: virtual private server setups, dedicated server hosting, and colocation clients.

There are no setup costs involved, and the service can be bundled to as many IPv4 addresses as needed and justified. Pricing is very competitive without any minimum commitment.

The default service will protect against most common DDOS attacks: built to negate attacks of up to 2gbps and 500kpps in size.

Get in touch to find out about more options at this enterprise PoP of ours!
