

Castlegem goes SSD only in Ashburn, VA

We are happy to announce the migration of all non-SSD VMs in Ashburn, Virginia, to pure SSD based virtual private server nodes. At a point of presence that is largely trading oriented, we felt the need to boost performance even further, with minimal tradeoff in terms of costs for storage space.

Clients now benefit from state of the art CPUs such as the Intel E3 v3 and E5 v2 series as well as fast and reliable virtualisation technologies like KVM, implementing virtio drivers over nodes that run SSD RAID setups exclusively.

During the first two months we will be offering extreme discounts on individual and bespoke solutions in Ashburn, so do get in touch!

Castlegem: *Enterprise performance for the community.*
