

Castlegem launching second Wave for the New York PoP & expanding Chicago Presence

We are happy to announce the expansion of our New York PoP, opening up for the public.

The Telehouse Chelsea PoP features Virtual Private Server (VPS) services and dedicated servers of the latest Intel E3 (V3) and E5 (V2) architecture, combined with unparalleled network topology and ultra low latency to the financial exchange, plus amazing throughput and speeds all across the country as well as to overseas destinations: we can offer sub-70ms latencies between London and New York, as well as latencies of mid 80s to mid 90s from New York to continental Europe.

In addition to New York, we are also upgrading our Chicago presence. With more and more traders flocking in, we decided to smoothly migrate our current PoP over to **THE** Data Centre in Chicago: 350 E Cermak Road. This will give us even lower latency to the Commodity and Stock Exchanges as well as a considerable upgrade in terms of network capacity. Until the end of April, we will be running both PoPs alongside each other. From May onwards, only the new one at Cermak will remain.

During the first quarter of 2014, Castlegem will be regularly featuring specials for our clients to get to know these PoPs of ours, and we encourage everyone to keep checking in to our facebook page at

<https://www.facebook.com/castlegem>

to stay up to date and get their share of our promotions to come!

Get your bespoke trading solution from Castlegem – the diamond hosting company among ISPs.
