

Castlegem upgrading single CPU dedicated server range & DDOS mitigation

Castlegem are happy to announce yet another upgrade of their dedicated server range. Effective immediately the single CPU dedis have been upgrade to E3-1231v3 by default. This is another performance boost compared to the upgrade from v2 to v3 only a little while ago.

Castlegem are now offering 10% more CPU performance (index based on E3-1230v2) for all new dedicated server orders without any increase in pricing.

Furthermore, we have upgraded our DDOS mitigation options for clients as well, keeping the pricing very close to the base price, but providing 5 times the mitigated bandwidth protection, and 8 times the mitigated pps protection!
