

Castlegem – New York PoP capacity expansion

Castlegem are pleased to announce that April saw the first part of the implementation of our core infrastructure upgrade. This upgrade includes routing capacity for 180gbps of bandwidth, along with additional redundancies on the way. Routing hardware has been tripled as well, not only providing us with the necessary flexibility we require, but also the ability to improve resilience and withstand failure scenarios without customer impact. During May and June, our New York PoP will see further upgrades boosting this prime location of ours!
