

Castlegem – New York PoP: Financial exchanges latency optimisations

Castlegem are pleased to announce that after April's routing and capacity upgrades we were able to further reduce latencies to major financial exchanges all over the globe, but with particular emphasis on New York City and Chicago.

Most exchanges in New York can now be reached within sub 1ms to sub 2ms latencies, which also includes major news providers and data feeds.

New York City to Chicago latencies have been optimised to generally give sub 20ms results now, and the Commodity Exchanges and data feeds on site can be reached within sub 1ms latencies due to the PoP already being located at Cermak.
